

Chris Yang handled the results section of the project proposal and implemented the Logistic Regression model. He set up the Genius API integration and combined the Spotify dataset with Billboard Hot 100 data to identify top songs by decade.

Nicholas Hernandez wrote the experiments section of the project proposal and co-wrote the progress report with Akhil. He implemented the BERT model and addressed the professor's slide revision suggestions.

Hansung Kang wrote the overview section of the project proposal and implemented the Naive Bayes and Decision Tree models. He built the foundation of the slide deck and incorporated results as teammates shared their code, with the full team contributing edits.

Akhil Vennam wrote the data section of the project proposal, and co-wrote the progress report with Nico. He implemented the KNN and SVM models and added recall and precision metrics across the colabs.
